The Formula Pro is a nod to our best-selling Formula Pant with upgraded features including a thermoregulating graphene lining for a perfect climate, thigh ventilation for temperature control, and an ultra-breathable membrane. Enjoy its classic stretch thanks to 3D technology and four-way stretch fabrics for unbeatable flex and ease of movement as you make those sharp turns. Hit the slopes with confidence knowing the abrasion-resistant scuff guards will protect against ski edge tears.

Features & Benefits

- Graphene lining
- Hook and snap closure waistband
- KJUS Waist Adjustment System
- Stretch insert on waistband back
- Back leg ventilation system
- Full length gusset
- Pants to jacket connection loops
- Preshaped knee area
- Snow gaiters with anti-slide elastic on leg hem
- Leg hem adjustment for boot access
- Ski edge protection on leg hem
- Soft lined hand pockets

The KJUS System

We enable sportspeople to fully focus on and exceed their performance. Whether on the golf course, on the slopes or in everyday life, KJUS apparel gives you unrestricted freedom of movement, keeps your body climate balanced and protects you against extreme weather conditions. The KJUS System is the root of everything KJUS does and encompasses the core elements of our apparel: K-Climate, K-Motion and K-Craft.

3D Technology

Full stretch throughout all layers, from the lining, insulation, outer fabric, and seams to create the ultimate range of movement without sacrificing warmth.

AC-Vent™

This KJUS-patented forearm venting system speeds the body's natural cooling process. Vents located in the lower arm allow for fine-tune air circulation to microregulate your temperature.

Anti-bacterial

Technical treatment that is blended into the fabrics, preventing the growth and spread of odor-causing bacteria.

Anti-Odor

This technology is applied to the fabric to absorb odor-causing bacteria.

Body Mapping

Special fabrics, structures, or insulations strategically placed in gender-specific anatomical locations to increase warmth or enhance breathability where it will be most effective for the body.

Breathable

Breathability comes as standard in all KJUS products, even in waterproof pieces. The number indicates the amount of perspiration that can escape from the fabric over a specific period of time. The higher the number, the more breathable.

Cooling

KJUS leverages two different technologies to cool the body. Innovative fiber structures increase the yarn's surface area to intensify natural evaporative cooling and prolong its effect. A permanent finish on the fabric's surface creates a cooling effect when in contact with the skin. These technologies work separately or together to provide cooling on hot days.

Dermizax® EV

A non-porous, stretchable and soft membrane with high moisture permeability, waterproofness and breathability.

Dermizax® NX

A non-porous, stretchable and soft membrane with high moisture permeability, waterproofness and extremely high breathability.

DWR

Fabric is coated with a durable polymer barrier that reduces surface tension, ultimately repelling moisture and dirt. For optimal performance, wash garment and reapply treatment according to instructions.

Eco-Coffee

An innovative, energy-saving process fuses recycled coffee grounds to the yarn, changing the filament characteristics to create a performance-enhancing fabric that is eco-friendly. Micropores fight against odor-causing bacteria and provide moisture-wicking while coffee grounds naturally infuse UV ray reflection into the yarn.

Eco-Friendly

This product contains fabrics, trims, and/or insulations obtained from varying amounts of recycled materials that are designed to have a reduced environmental impact.

Extra warmth

Specially engineered materials provide exceptional warmth in extremely cold to cold temperatures.

FREELITE

Innovative knit construction provides superior mobility. Engineered zonal body-mapping is specifically designed for the garment's use, delivering unparalleled breathability and temperature management.

Gemini

Our Gemini series is constructed from cutting-edge reversible material; waterproof on the dark side and windproof on the light side. The dark side traps heat and pushes it through the fabric. The light side out rejects heat, pushing it to the dark side. The result is a temperature variation difference of up to 10°F/6°C degrees.

Graphene

Specialized materials engineered with highly conductive graphene absorb body heat and evenly transports it throughout the fabric, reducing cold spots and regulating heat.

HeiQ Fresh Tech

Anti-odor technology that enhances fabrics with natural, long-lasting freshness by eliminating body and other environmental odors. Effective for up to 100 washes.

Hyper 3D Stretch

Highly waterproof stretch panels with built-in 3D expansion channels are strategically placed to provide extra stretch throughout the swing. Its placement follows the natural flow of the golf swing to help reduce drag and enhance the energy transferred from the body to the ball.

KJUS Fast Thermo Core

High-performance stretch insulation that traps warm air and wicks moisture away, adding warmth while regulating body temperature in cold conditions.

KJUS Growth System

A built-in system to accommodate a quick-growing junior athlete. Special construction at the hem, arms or waist allows you to easily increase the garment's size at different intervals.

KJUS Premium Down

Our premium down is responsibly sourced, carefully selected and thoroughly cleansed of allergens. This process creates an extremely lightweight down that provides maximum heat retention.

KJUS Premium Leather

This new generation of leather is abrasion-resistant, flexible, soft and durable.

KJUS Premium Wool

A blend of the finest natural wool fibers that are intrinsically moisture-wicking and luxuriously warm.

Laser cut

Laser cut technology prevents fraying of open edges, which are bonded with the highest precision.

Lifestyle

Our lifestyle apparel incorporates key KJUS technologies and premium craftsmanship in everyday wear, culminating in high-performance and luxurious style.

Lightweight

Lightweight is a signature feature that distinguishes KJUS products. We use light materials that out-perform others in warmth-to-weight ratio.

Light warmth

Specially engineered materials provide warmth in mild temperatures.

Loro Piana Storm System

Storm System® is a Loro Piana construction using natural fibers. It consists of a water-repellent Rain System and a breathable hydrophilic membrane that is resistant to water and wind.

Mineral Circulation

Natural minerals woven into the fabric convert infrared and visible light into energy close to your body, increasing your tissue's transfer of oxygen. This aids your body's recovery by increasing blood flow and oxygen levels, which helps soothe joint and muscle soreness and promotes faster healing.

Moisture Renewal

Ultra-soft, breathable yarn engineered to replenish moisture, leaving your skin smooth and hydrated even in harsh conditions.

Packable

Folds down into an ultra-compact size that can be packed into its own pocket for easy portability.

Polartec® Alpha®

This military-grade fleece keeps you warm, even when the body is wet. It is quick drying, highly durable and has a high warmth-to-weight ratio.

Quick-drying

An innovative technology in the fabric or its construction that quickly wicks moisture away from the body, facilitating improved evaporation.

Reactive Climate Control

Create the optimal environment as your body heat fluctuates. High-performance fabrics are combined with thermodynamic materials that trap body heat during peak performance and are released after you cool down, helping to regulate your body temperature.

Reversible

Designed with uniquely different performance-enhancing technologies engineered for each side of the garment. This allows you to get specific technologies supporting your body's microclimate, flexibility and more depending on what side is facing out.

Schoeller®-dynatec™

This protective fabric has abrasion-resistant properties and acts as a shield used primarily on the bottom of our ski pants and raingear to protect against ski edge and golf shoe damage.

Schoeller®-PCM®

This phase change material actively equalizes extreme temperatures and provides balanced inner climate at multiple temperatures. Wax within the fabric trap excess heat. When the temperature drops, the stored heat is released back to body.

Stretch

Stretchable fabric that expands and retracts in sync with the body and provides unrestricted freedom of movement.

SpheraTEMP

Maximum insulation warmth with extremely low mass, this new generation of synthetic down alternative is comprised of tiny spheres that mimic down at a fraction of the weight. It is highly water resistant and continues to insulate even when wet. Developed to be hypoallergenic and free from animal derived materials.

Toray 3DeFX+™

Synthetic insulation fabric consisting of four different spiral-shaped microfibers with high elasticity and thermal retention.

Ultra-soft

Exceptionally smooth, ultra-stretch fabric that is extremely soft against the skin.

Ultra-Sonic Bonding

Technical technique used to bond materials using ultra-sonic vibrations for a thin, longer lasting and precise seam.

Ultra-stretch

Highly stretchable fabric that expands and retracts in sync with the body and provides unrestricted freedom of movement.

UPF Protection

The Ultraviolet Protection Factor (UPF) rating system measures how well a fabric prevents UVA and UVB rays from penetrating through the fabric to the skin. The higher the rating, the greater the protection.

VaporTemp

A highly innovative, thermoregulating fabric treatment that captures body heat and spreads it across the fabric to reduce overheating and eliminate cold spots. At the same time, it vigorously draws perspiration away from the skin and out of the garment.

Warm

Specially engineered materials provide additional warmth in cold to mild temperatures.

Waterproof

Engineered with sealed seams and water-resistant zippers. The higher the number rating, the more waterproof the fabric.

Windproof

Specially engineered coating applied to the outer fabric that provides wind blocking properties to the garment.
